Size: 60

Lipotropic literally means "fat-loving" and the term is used to refer to substances that are able to help the liver metabolize fats. Lipotropic nutrients increase production of lecithin by the liver thereby helping to keep cholesterol more soluble and lessening deposits in blood vessels. They help prevent accumulation of fats in the liver. They also detoxify amines, which are by-products of protein metabolism.

Besides improving fat metabolism, lipotropics will also aid in the metabolism of fat soluble nutrients.
